## Providing Healthcare Industry with SAFETY & QUALITY

### In TRANSPORT FOR HEALTHCARE

**Healthcare's needs** The public Health code

*"The responsible pharmacist must organize and watch the drugs distribution, and make sure that the transport conditions always guarantee the good conservation, integrity and safety of the drugs and samples..."*

**Healthcare's ideal supplier** For the excellence in transport organization

- A specialists team
- A dedicated network
- Guaranteed delivery times
- A strict laws, regulations and safety rules respect
- IT System
- In accordance with Iso Standards (9001 version 2000)

### Transport security

- A "non-stop operations" service available 365 D / 365, ensuring a watch all along the transportation and able to trigger safety plans in case of anomaly, incident or accident.
- A complete and immediate information given to the customer / authorities by the safety adviser or radioprotection officer
- Controls realized before, during and after the transport
- Equipped and reachable vehicles at all times
- ADR equipped vehicles (board safety pack, fire extinguishers...)
- Containers and vehicles seal
- Presence of safety procedures and instructions in vehicles

## Forwarder's obligations Safety Adviser and Radioprotection officer

### The people's safety

- Employees training and qualification (sedentary people, drivers and field sales)
- Employees (compliant with regulation, compliant with the specification worksheet)
- Secured accesses (digital access lock, safety perimeters, secured boxes for the transit, platform signaling)
- Work procedure and instructions (radioprotection program, incident-accident procedures, loading and unloading instructions...)

### The Product's safety ADR or ICAO-IT / IATA-DGR : specific packagings

### Forwarder's advising role

- To propose optimum transport solutions whatever the customer goods nature is, for limited or regular deliveries
- To design tailor-made transport plans
- To offer an efficient information system
- Isovitale and Isolife are committed in playing an advising role in the specification worksheet, as well as in the domestic and international global logistics organization, by respecting its customers demands, the laws, the directives and the regulations

### To respect the specifications of HEALTHCARE

- To respect the delivery times
- To ensure parcels tracing
- To ensure a proactive information sharing in case of delay or incident
- To respect the transport regulation and safety rules
- To perform deliveries in the services (handling)
- To guarantee warehouses and vehicles cleanliness, healthiness and safety

### The specification worksheet

- The consignor's specification worksheet must mention : the receivers, the carried products (nature, weight, volume, flows), the sticking and tracing rules, the pick-up locations and instructions, the delivery times, the transport order transmission mode, the compulsory documents, the information feedback mode, the safety instructions
- The shipper must attach the best practices guide(s) to its specification worksheet

**Isovitale and Isolife by helping Healthcare Industry to control the risks owing to their shipments, allow them to focus only on their core business.**
